

POWER FORWARD AT THE OFFICE.

Manage an office building? We're office-ially at your service.

With computers, appliances and constant lighting needs, offices can be extremely energy-intensive. PSO offers tips, rebates and services to help cut overhead at your building or facility.

REBATES AND REWARDS. THAT'S OUR CALLING CARD.

Take advantage of PSO's rebates and power management solutions to save money at your facility.

HVAC Rebates: PSO offers rebates on unitary HVAC and HVAC variable frequency drives. Variable frequency drives prolong equipment life and improve energy efficiency by precisely varying the speeds of HVAC motors.

Lighting Rebates: High-performance LEDs reduce lighting costs by 75% or more. They also dramatically reduce cooling costs during summer months. PSO offers significant rebates to help your business upgrade to LEDs.

Occupancy Sensor Rebates: Occupancy sensors shut off lights and/or HVAC in unoccupied rooms. Install occupancy sensors to control unoccupied spaces and earn rebates from PSO.

Peak Performers: Peak Performer businesses earn cash incentives for voluntarily reducing peak electrical usage just a few times per year. These elite businesses help PSO keep rates affordable by reducing usage during periods of high demand.

FOR EXTRA SAVINGS, MEMO-RIZE THESE TIPS.

- Maintain your furnace or heat pump. Schedule a maintenance visit at least every other year to ensure efficiency, reliability and safety.
- Clean or replace HVAC filters monthly. Dirty filters waste energy and place unnecessary strain on your HVAC system.
- Turn off lights in empty rooms. This simple step can significantly reduce power consumption.
- Adjust the thermostat. Bump temperatures a few degrees up in summer and a few degrees down in winter to rack up significant savings.

From the front desk to the corner office, PSO can help you save energy throughout your facility. Check out tips, tools and energy-efficiency rebates at PowerForwardWithPSO.com. Or call **888.776.1366** to learn more.
